Project Name : DigiEntry

Project idea/features (at least 5 points):

- "DigiEntry" describes a web application designed for managing daily gate entry using QR codes.
- The application enables users to create unique QR codes that can be scanned at the entry gate to gain access. The system is designed to simplify the process of gate entry in the hostels.
- The application is designed to be user-friendly with a simple and efficient interface that allows users to easily generate and print their QR codes.
- Additionally, the system is designed to be scalable, with the ability to handle large volumes of users and gate entries. The QR codes are unique and can be easily scanned by gate attendants, ensuring accurate and efficient tracking of gate entry.
- Overall, this web application for daily gate entry using QR codes is a powerful tool for improving access control and security. It has the potential to be used in a wide range of settings and is an effective solution for managing busy gate entry.

Introducing pageless format

The pageless format allows you to use wide images and tables, and view documents without the interruption of page breaks. You can change the format for any of your documents. **File → Page setup.** [Learn more](#)
